

Department of Energy National Lab User Facilities

Selected FY25 Industry Projects

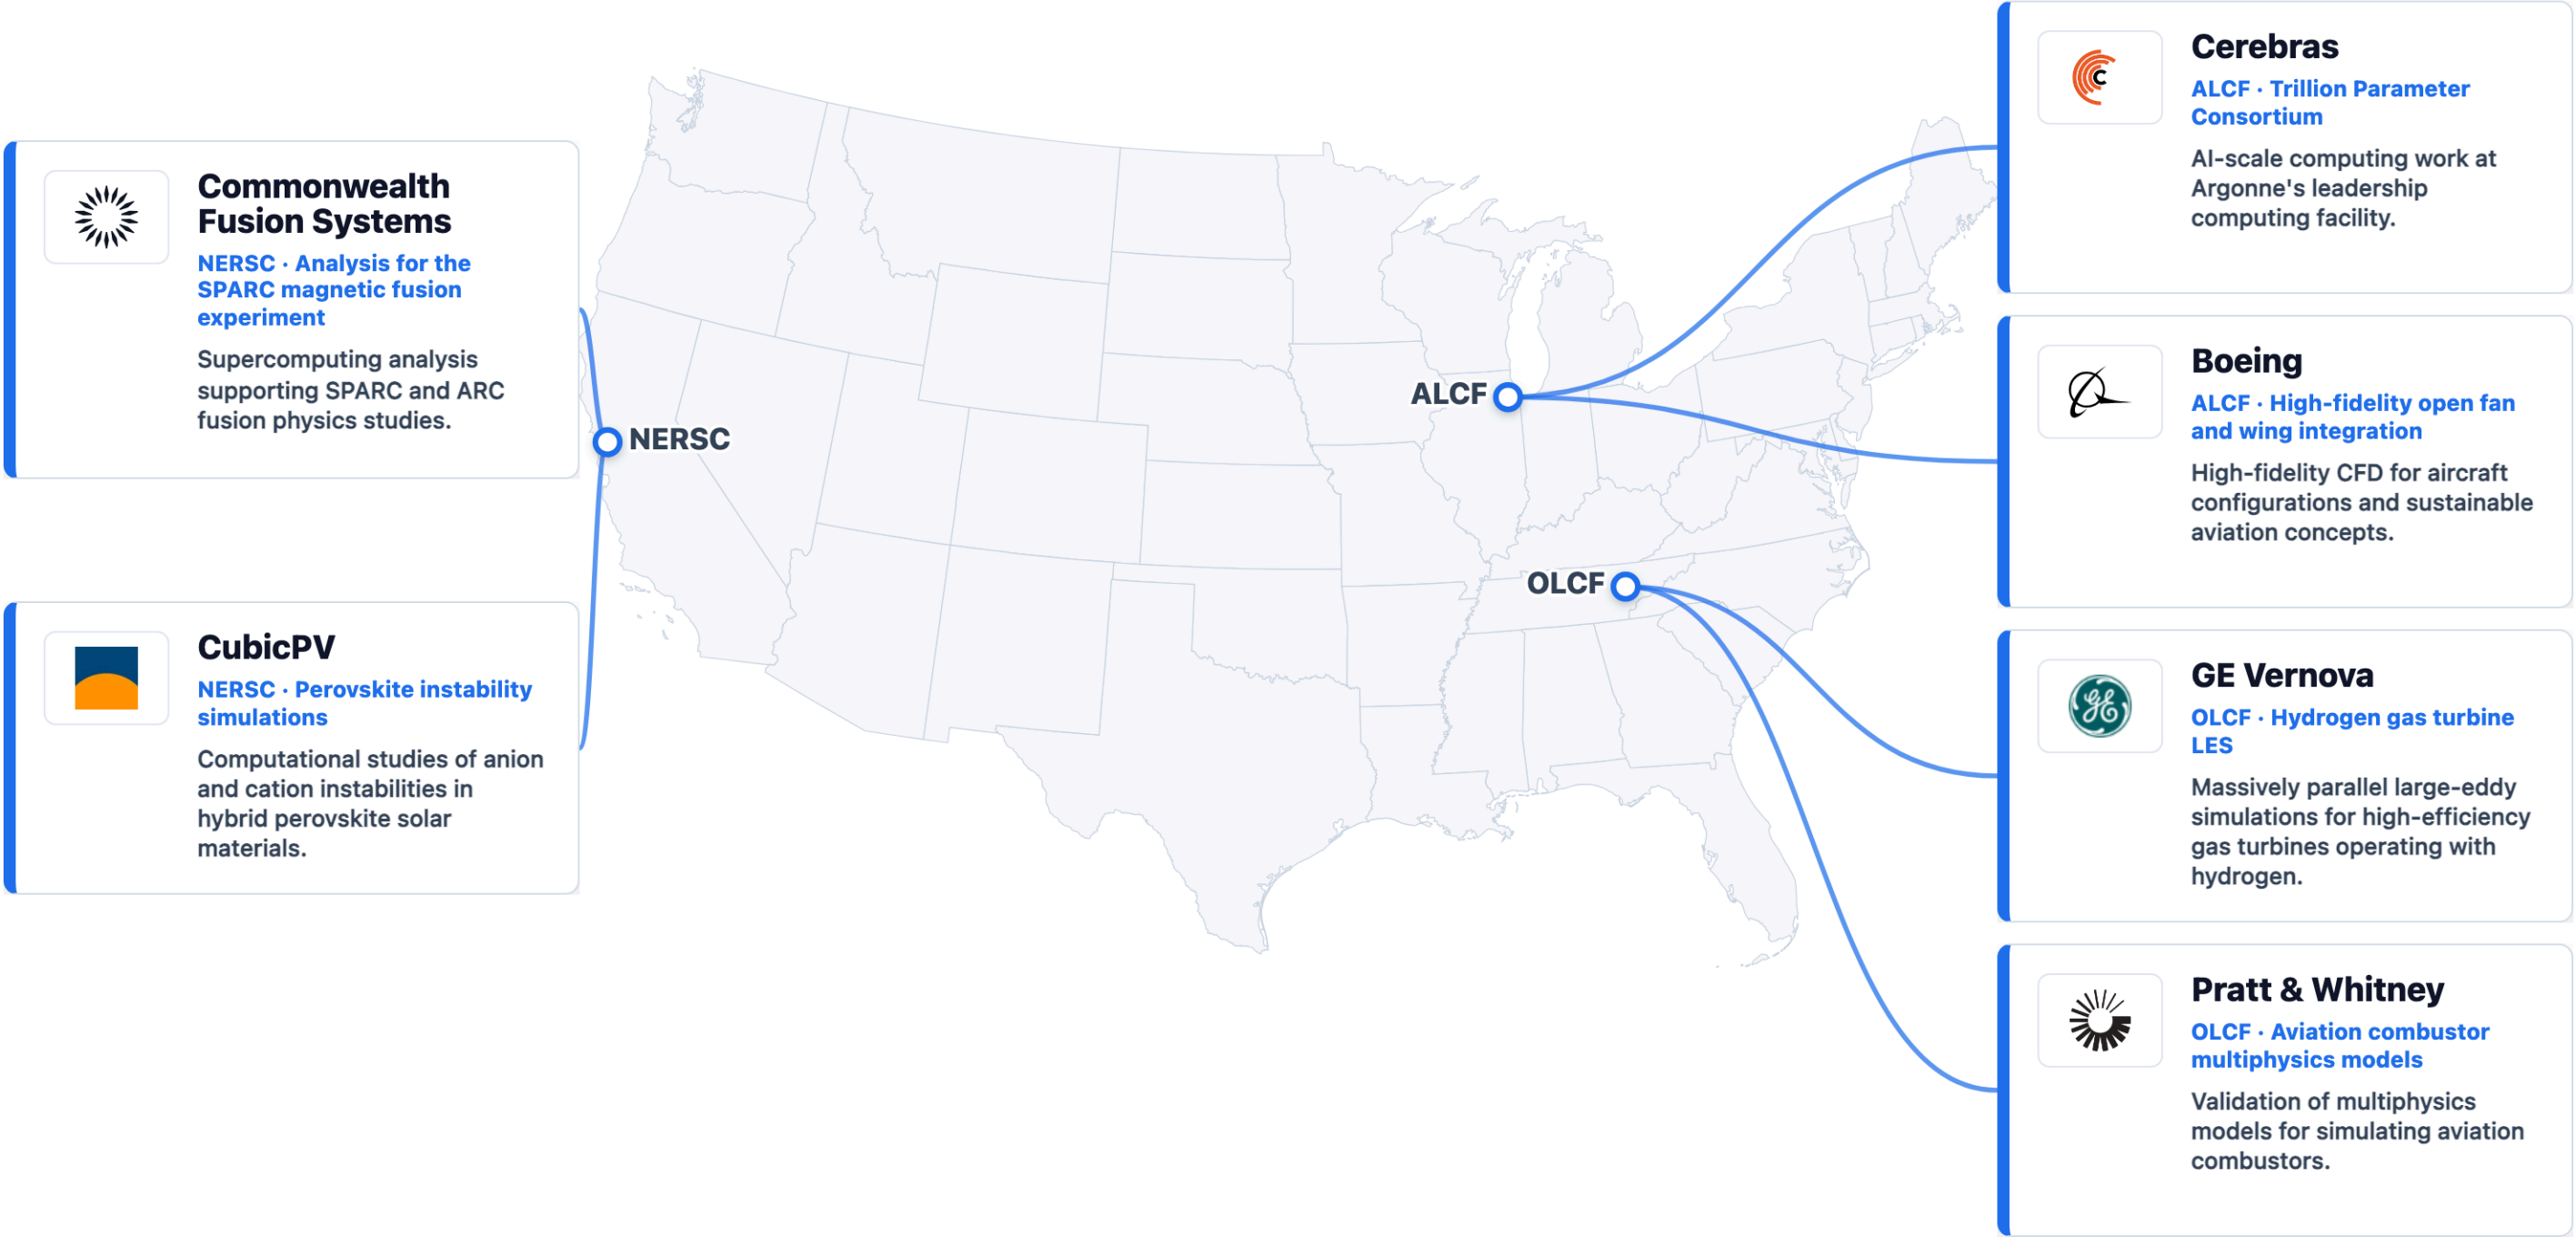

Panels

1. Supercomputing
2. X-ray Light Sources
3. Nanoscience Centers
4. Fusion Facilities
5. Accelerator & Isotope Facilities
6. Neutron Sources

Supercomputing

DOE leadership computing facilities used by industry in FY2025

Source: DOE-SC User Statistics by Project FY2025 workbook

X-ray Light Sources

Synchrotrons and X-ray lasers supporting industrial materials, batteries, and chips

Source: DOE-SC User Statistics by Project FY2025 workbook

Nanoscience Centers

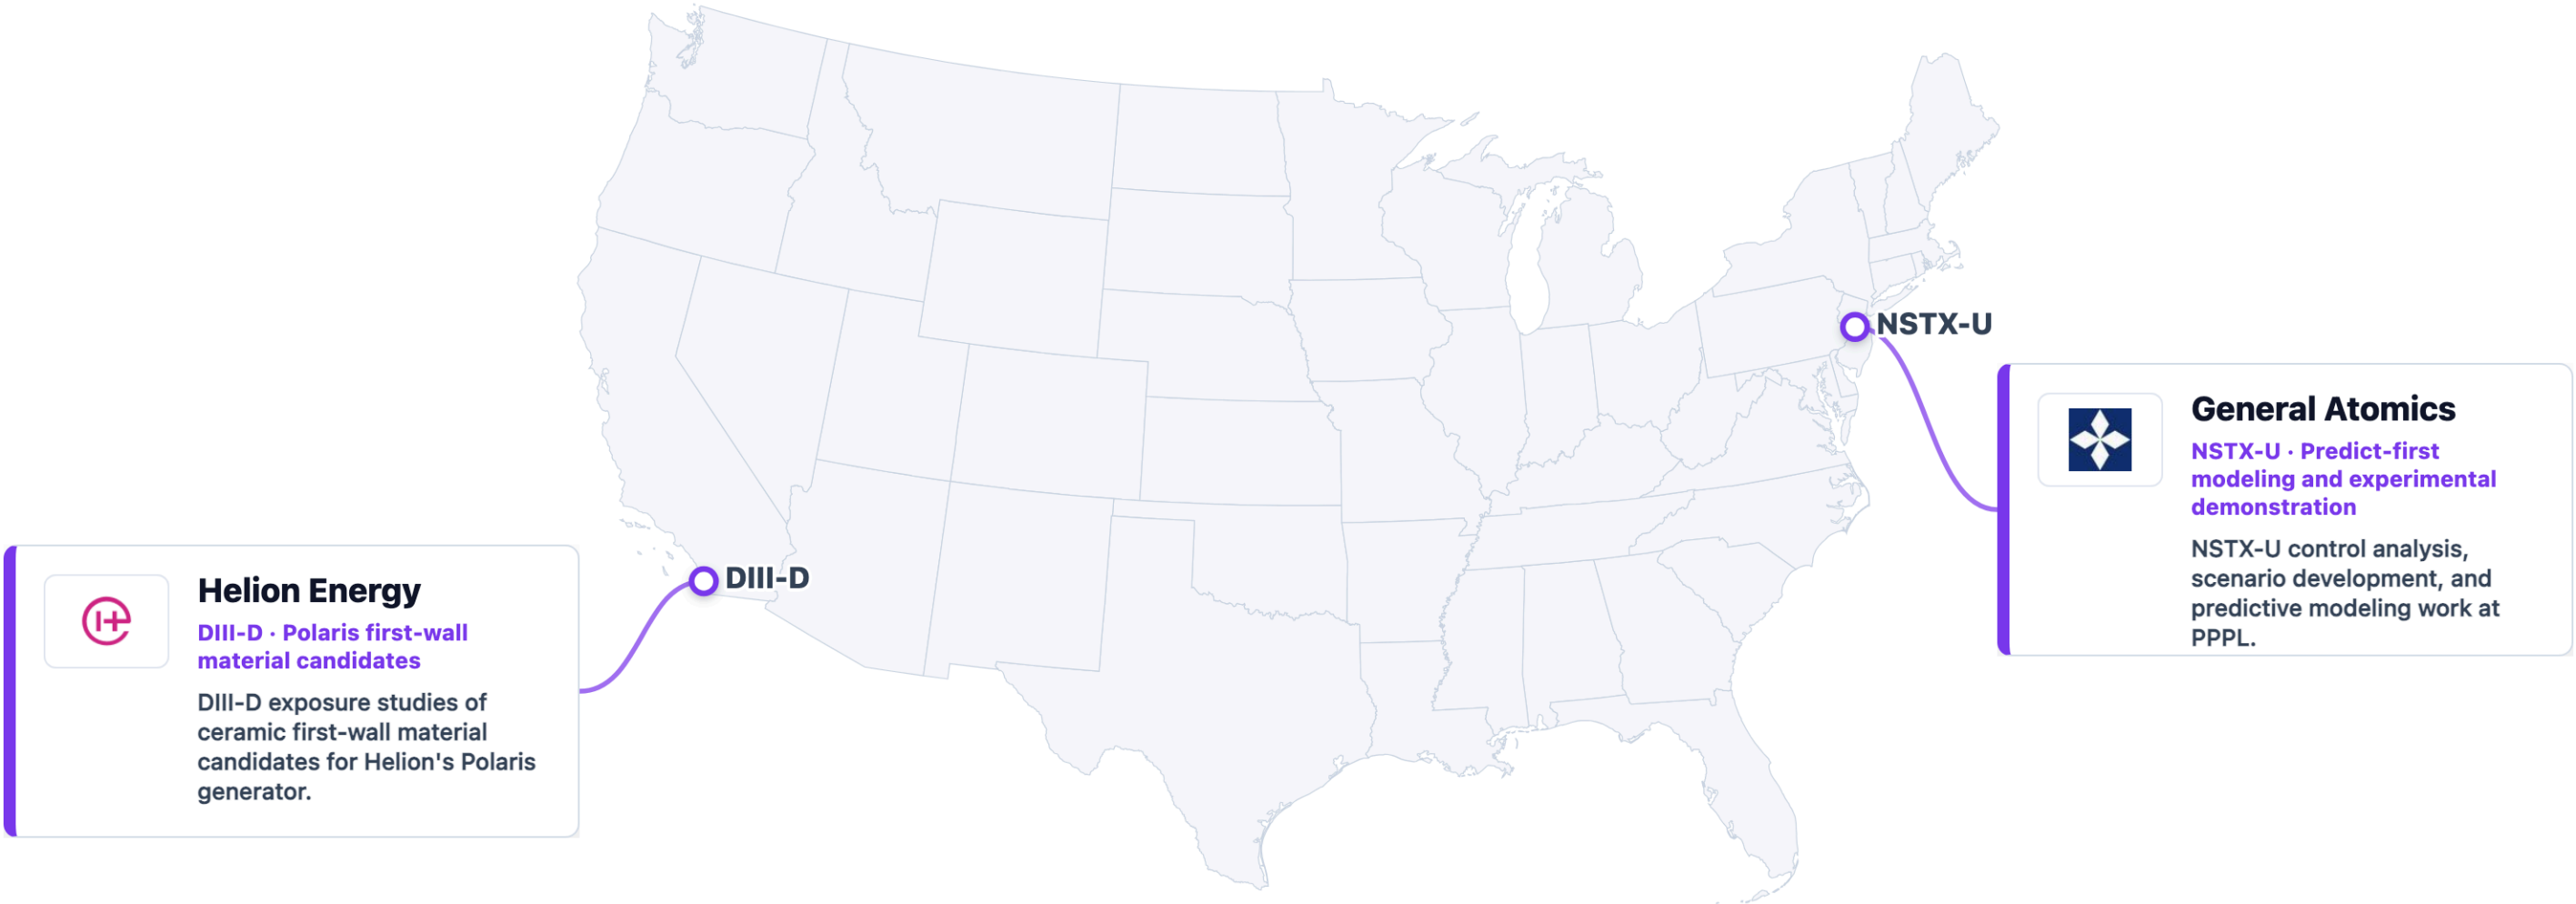

Nanoscale fabrication, microscopy, and materials characterization for companies

Source: DOE-SC User Statistics by Project FY2025 workbook

Fusion Facilities

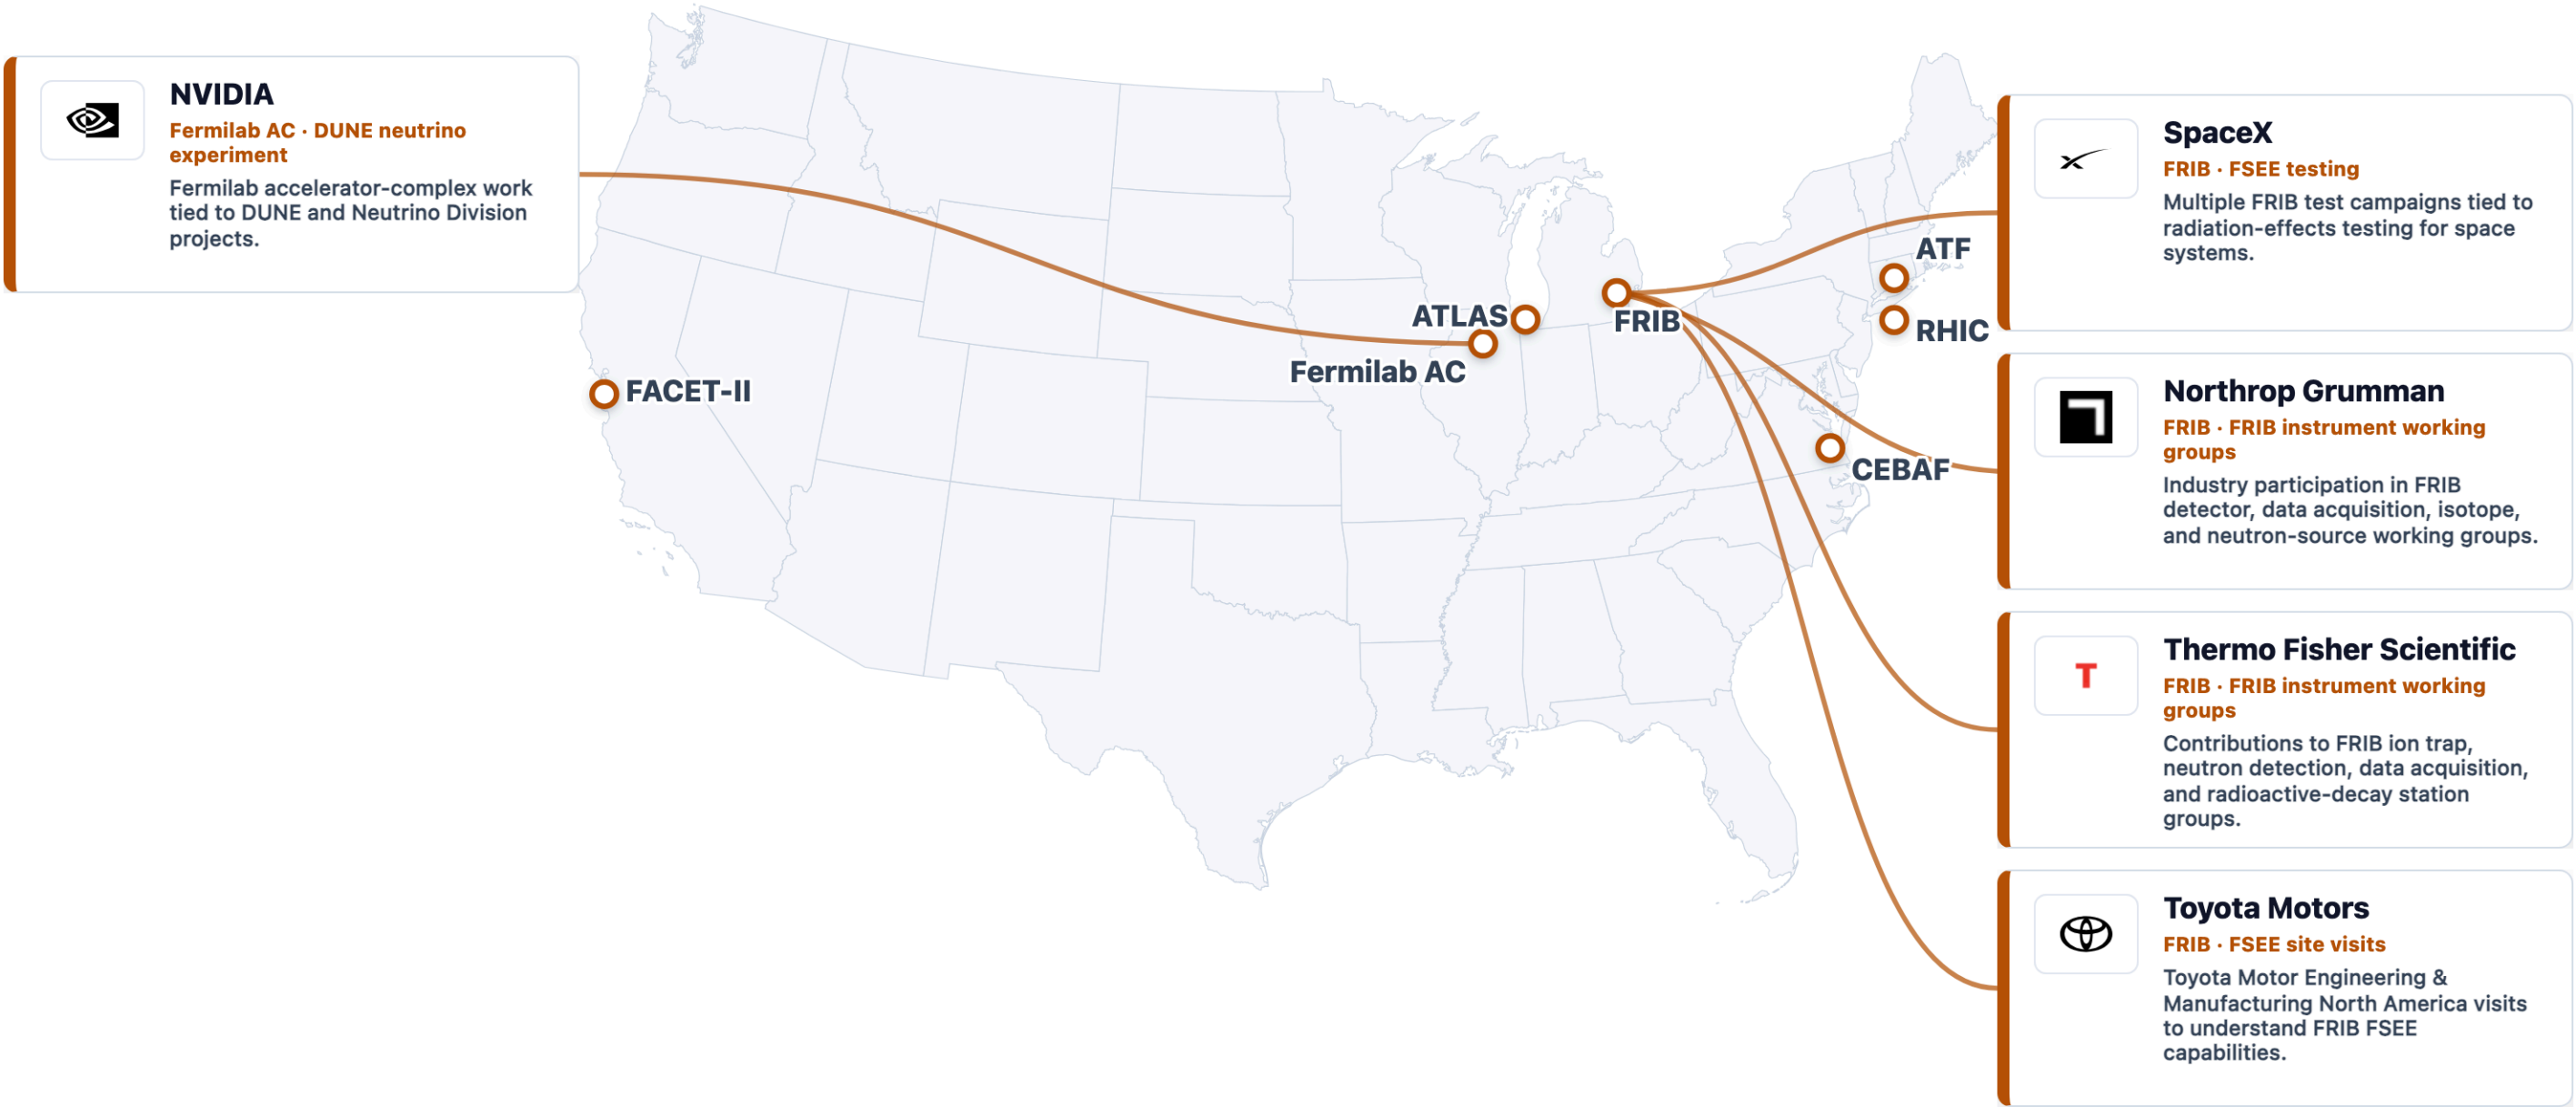

Tokamak and spherical-torus experiments with industrial fusion users

Source: DOE-SC User Statistics by Project FY2025 workbook

Accelerator & Isotope Facilities

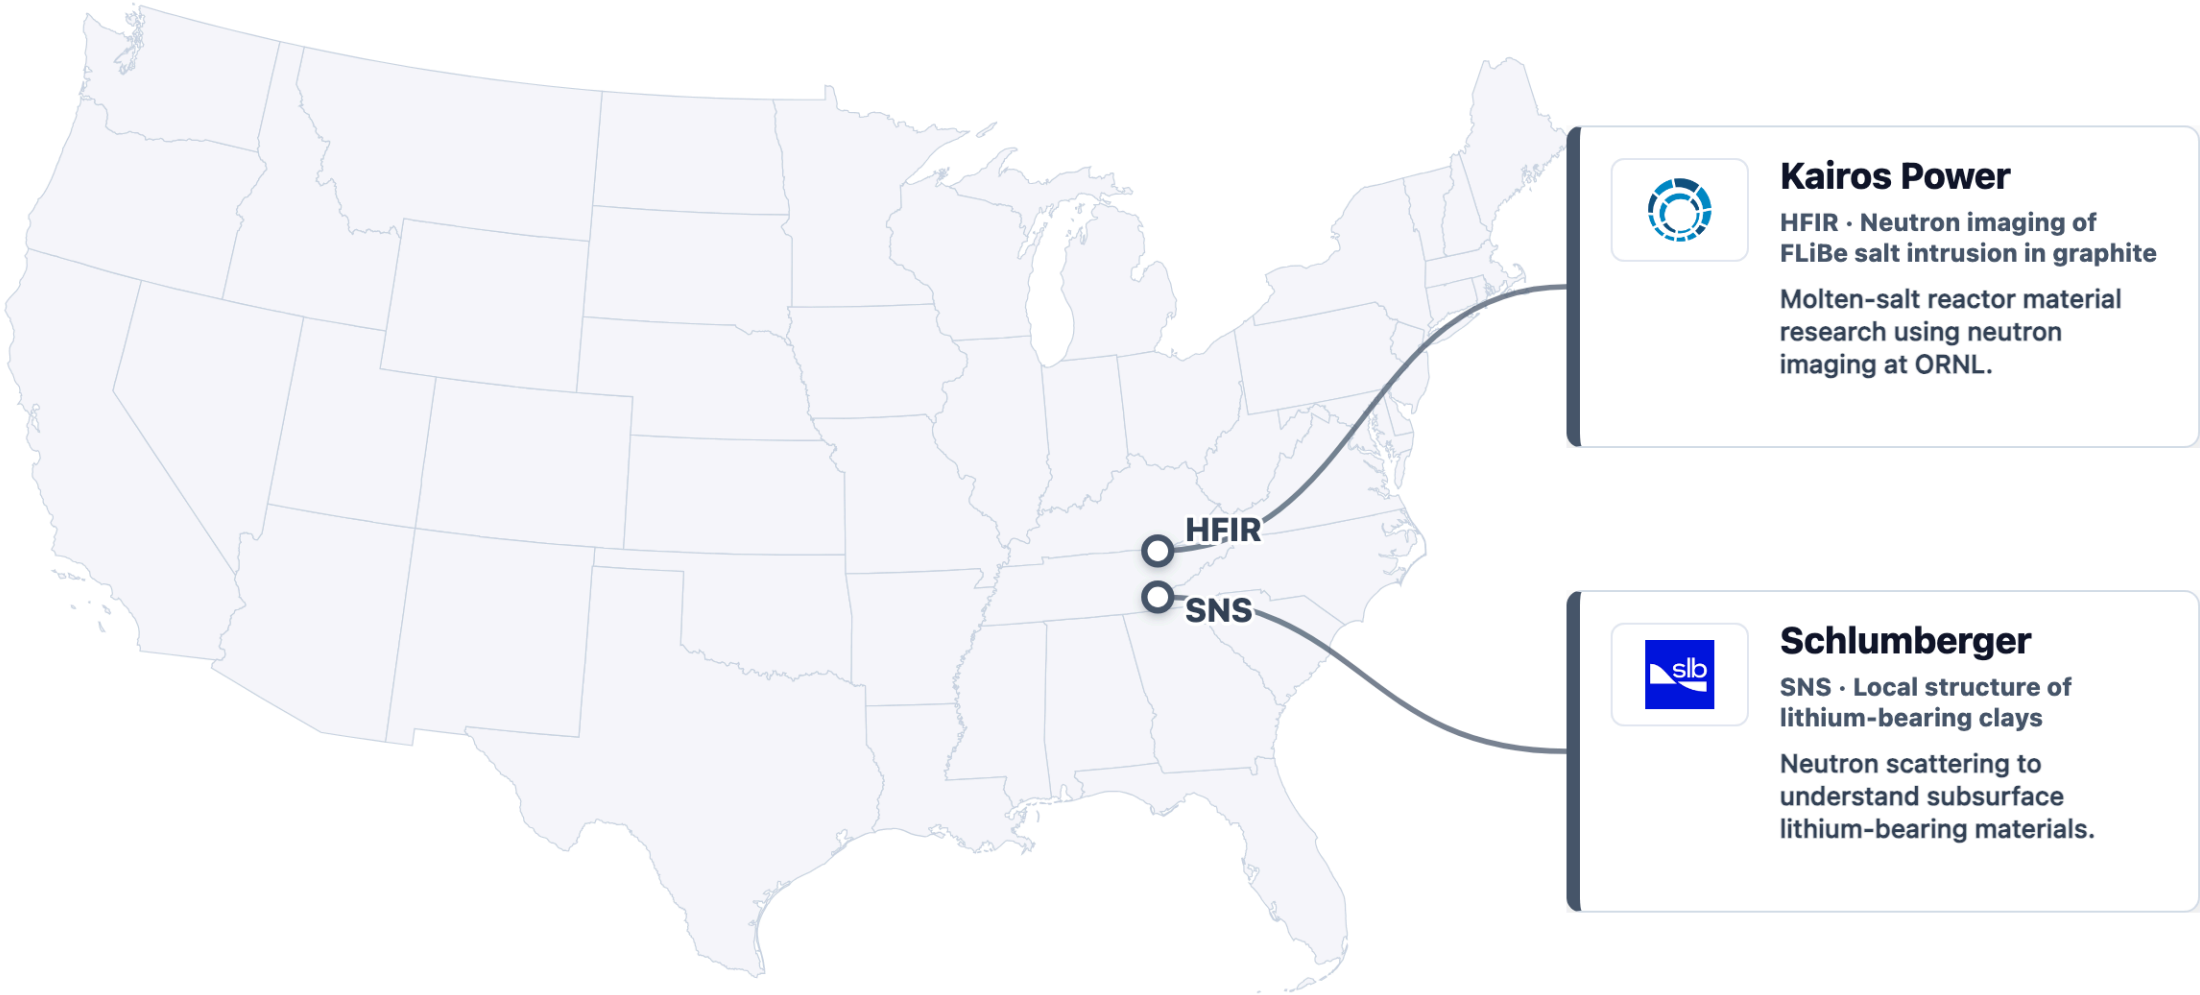

Accelerator testbeds and rare-isotope facilities used by aerospace and electronics companies

Source: DOE-SC User Statistics by Project FY2025 workbook

Neutron Sources

Neutron imaging and scattering for energy, nuclear, industrial, and structural materials
